Abstract of **JP2004289298**

PROBLEM TO BE SOLVED: To provide a data processor for preventing the processing of a proper frame from being disturbed even if temporarily receiving a large quantity of DoS (Denial of service) attack frames from a network.
SOLUTION: A control part 4 for detecting a continuous frame whose contents coincide for discarding is installed on the inside or front stage of a reception part 1 and the data received by the reception part 1 are stored into a buffer memory 2 before a CPU3 processes the reception data.
